

Senior Software Developer with **7+ years** of experience building large-scale distributed systems serving **40+ million users**. Proven track record in **full-stack development** using modern technologies including **Python, Golang, and Kotlin**, and cloud infrastructure. Led cross-functional teams and delivered impactful features from concept to production in fast-paced, product-driven environments.

SKILLS

Programming Languages	Kotlin, Golang, Java, Python
Backend Frameworks	Django, Spring Boot, Express.JS
Frontend Technologies	React, NextJS, Angular
Databases & Messaging	PostgreSQL, MySQL, Kafka, Redis, Cassandra
Cloud & Infrastructure	Google Cloud, Docker, Kubernetes, Datadog, Sentry
Additional Technologies	GraphQL, REST APIs, Microservices, CI/CD

EXPERIENCE

StackAdapt

Toronto, Canada

• Senior Software Engineer

(5 months) Jan 2026 — Present

- Engineer on the **User Profile** team, leading the migration of large-scale user profile storage from **ScyllaDB** to **KVRocks** to improve performance and reduce operational cost.
- Driving **user profile centralization** initiatives, consolidating distributed user data into a unified service for consistent access across the platform.

Turing

Remote

• Senior Software Engineer

(10 months) April 2025 — Jan 2026

- Founding engineer of **EduArena.ai**, an educational AI platform, scaling to **500K+ users in 5 months** through rapid iteration and cross-functional collaboration with product managers and designers.
- Built and deployed **ML scoring infrastructure** for EduArena.ai's scoring system, implementing model evaluation pipelines that improved data quality by **40%**.
- Designed scalable **data processing pipelines** using **Apache Kafka** to handle **100k+ daily user interactions**.
- Built and lead a **5-member engineering team**, establishing technical direction, code review processes, and mentoring practices for scalable **full-stack development** using **Python, React, PostgreSQL, and Kubernetes**.
- Recognized as the **Top Tech Lead at Turing** for exceptional leadership, technical impact, and successfully shipping a flagship product from concept to production.

Showpass

Calgary, Canada

• Software Engineer – Infrastructure

(1.5 years) August 2023 — April 2025

- Architected and deployed **ML infrastructure** for event attendance and ticket price recommendation system, implementing **MLOps pipelines** with automated model evaluation, versioning, and deployment using **Kubernetes and Docker**.
- Implemented **model monitoring and evaluation frameworks** with automated performance tracking, achieving **95% model accuracy** and reducing inference latency by **60%**.
- Led infrastructure engineering of the company, achieving **99.99% SLO** availability through comprehensive monitoring with **Datadog** and **Sentry** integration.
- Optimized database costs by **35%** and CI/CD pipeline costs by **75%** through performance tuning and resource optimization in distributed systems.
- Executed zero-downtime migrations for legacy **Kubernetes, PostgreSQL, and Nginx** services, improving system reliability and scalability.

Google Summer of Code - Postgres Organization

Calgary, Canada

• Mentor and Open-source database developer

(1 year) May 2024 — May 2025

- Designed and implemented Write-Ahead Logging (WAL) infrastructure for the **Pgmoneta** repository, improving database reliability and performance (**Final Report**).
- Built high-performance database APIs and tools, contributing to open-source PostgreSQL ecosystem used by financial services companies.
- Selected as one of the top 5 proposals from over 70 submissions in **Google Summer of Code**, demonstrating technical excellence and project scoping abilities.

University of Calgary

Calgary, Canada

• Research Engineer

(2.5 years) Jan 2021 – Jul 2023

- Research on software analysis frameworks for large-scale codebases, achieving **50% reduction in code complexity** and **80% performance improvement** over baseline approaches.
- Developed machine learning-based programming language detection system with **90% accuracy**, contributing to developer productivity tools.

Divar

Tehran, Iran

- *Software Engineer* (1.5 years) Aug 2019 — Dec 2020
 - Led full-stack development of Real Estate marketplace features for **40+ million users**, designing and implementing scalable solutions using **Python, Django, PostgreSQL, and Redis**.
 - Owned and maintained **2 critical microservices** with 24/7 uptime requirements, implementing comprehensive monitoring with **Grafana** and **Kubernetes** orchestration.
 - Collaborated with cross-functional teams on complex feature design and implementation, conducted code reviews, and participated in technical hiring committee for 10+ software engineers.

Tapsell

Tehran, Iran

- *Software Engineer* (2 years) Sep 2017 — Aug 2019
 - Built end-to-end video streaming platform handling **50M daily requests**, developing both frontend and backend components with comprehensive deployment and monitoring.
 - Launched machine learning-powered retargeting system for 30M users, achieving **10x improvement in click-through rates** and **70% increase in conversions**.
 - Maintained 4 production microservices using **Kotlin, Spring Boot, Kubernetes, Kafka, and Cassandra**, ensuring high availability and scalability in distributed architecture.

EDUCATION

Master of Science in Computer Science, University of Calgary
Bachelor of Science in Computer Engineering, University of Tehran

Jan 2021 — Jul 2023
Sep 2015 — Jun 2020

VOLUNTEER ACTIVITIES

- **Open source Golang contributor** to **GatewayD**.
Implemented **CDC** module (capture-data-change) for **PostgreSQL** using logical WAL replication using **Golang** (**GatewayD**).
- **Technical Coach** at **Startup weekend** event. Platform Calgary.
Mentored 10+ teams working on their startup ideas over a two-day hackathon.
- **President** of Computer Science Graduate Society, University of Calgary.
Served as Graduate Student Council Representative and held events with 40+ attendants each.
- **Technical mentor** in the summer of code event, University of Tehran.
Mentored 5 junior software developers to develop a cloud storage application to be used by university students.
